

VISUAL COMFORT-FLAVORED · INDEPENDENT PROTOTYPE

VC Retail Analytics

Dealer sell-through, margin depth, seasonality, field grades, materials planning, and vendor scorecards – plus a governed assistant – on synthetic lighting-retail data.

Walk

Overview → Analytics →
Assistant → Catalog.

Inspired by Visual Comfort & Co. public brand language (designer lighting, trade + consumer). Not commissioned client work.

THE OPPORTUNITY

Designer lighting retail, grounded in data

Public support is strong for FAQ and human escalation – but dealer margin, seasonality, rep grades, and vendor scorecards are missing from chat. This prototype closes that gap with governed warehouse metrics.

Ceiling

Wall

Lamps

Outdoor

Fans

Alabaster

Cordless

Channels

Consumer · Trade ·
Contract

Tenancy

Dealer scope from
session – never
the prompt

Honesty

Every number
from a query

Browser → API → SQLite → public edge

End-to-end wiring · local public demo

Bronze → Silver → Gold

Optional cloud path — same product contracts

Snowflake path · VC_RETAIL_DEMO

Local seed

SQLite demo.db
dealers / products
bronze events

Load

PUT JSONL □
@BRONZE.INGEST_STAGE
COPY INTO VARIANT

Transform

o2_transform.sql
normalize views
SILVER.FACTS

Govern

o3_governance.sql
USER_DEALERS map
row-access policy

Serve

SERVING views
same metric SQL
reader role

Semantic view
Cortex Analyst
reconcile evidence

Same browser UI

--backend snowflake --connection <reader>
Store.rows() swaps SQLite for Snowflake SERVING

Reconcile gate

scripts.cloud reconcile compares
local silver_facts vs SILVER.FACTS counts/sales

Honesty rule

Only claim live cloud after reconcile evidence
Offline assistant still not an LLM

VC_RETAIL_DEMO layout & row policy

BRONZE	DEALERS, PRODUCTS, EVENTS (VARIANT), INGEST_STAGE
SILVER	FACTS + QUARANTINE
GOLD	Channel / family / region aggregates
GOVERNANCE	USER_DEALERS + DEALER_SCOPE row-access policy
SERVING	Secure views for the app + semantic view

Ordered setup

1. **doctor** – connection check
2. **platform** – create DB / schemas / WH
3. **load** – PUT JSONL → COPY VARIANT
4. **transform** – SILVER.FACTS
5. **governance** – RAP on SERVING views
6. **semantic** – VC_RETAIL_SEMANTICS
7. **validate · reconcile** – evidence before “live” claims

Run app: `--backend snowflake`

One UI • two backends • closed metrics

Local

- `python3 -m app.server`
- SQLite `data/demo.db`
- Dealer WHERE from session cookie
- No cloud credentials

Snowflake

- `--backend snowflake`
- USE SCHEMA SERVING
- Same metric SQL shapes
- RAP enforces dealer scope in-warehouse

Governed metric contracts

portfolio silver_facts GROUP BY dealer	GET /api/metric
by_channel GROUP BY channel	GET /api/metric
by_family GROUP BY family	GET /api/metric
by_region GROUP BY region	GET /api/metric
stock_risk units_sold >= on_hand * 2	GET /api/metric
quality quarantine GROUP BY reason	GET /api/metric

API map & ask router

POST /api/login	Session cookie · dealer bind
GET /api/summary	Overview KPIs
GET /api/metric	Closed METRICS vocabulary
GET /api/analytics	Margin / season / field / supply
POST /api/ask	today proposed router
POST /api/escalate	Handoff JSON (demo)
GET /api/products	Catalog attribute search

/api/ask routing · Today vs Proposed

TODAY mode

- match_faq(q)
- hit ☐ static FAQ + source id
- miss ☐ escalate stub
- form/phone pattern
- no warehouse tools

Escalation

- POST /api/escalate
- structured JSON packet
- lane hint + question
- demo handoff only

Shared guarantees

- Dealer filter from session cookie — never from the question text
- SYNTHETIC label · offline assistant is not an LLM

PROPOSED mode

- FAQ if policy-only
- else interpret_metric(q)
- metric_sql + dealer where
- tools + descriptions
- tool trace with SQL

Refuse / clarify

- unknown metric
- forecast invent
- closed vocabulary
- no hallucinated stock

Today vs Proposed · sample analytics

TODAY

Site support pattern

- Form + phone lanes
- Static FAQ
- Human chat CS
- Escalate order status
- No warehouse metrics

PROPOSED

Governed retail AI

- Grounded FAQ + sources
- Catalog lookup
- Verified metric tools
- SQL in tool trace
- Structured escalate JSON

Prompts that exercise the wiring

<https://vc.datasharkbi.com>

Open live demo →

Today

- *custom order lead time* → FAQ + source
- *what is open box* → policy snippet
- *where is my order 12345* → escalate stub

Proposed

- Login **operator** / vc-demo (full Field & Supply)
- Hard-refresh after Access OTP
- *show margin percent* → insight + table + SQL
- *show vendor scorecard* → Prefer / Watch / Exit
- *show rep grades* → composite A-D
- *alabaster* → catalog hits
- *invent next quarter forecast* → refuse

Offline assistant is a FAQ + metric router – **not an LLM**. Only claim live Snowflake after reconcile evidence.

INDEPENDENT · SYNTHETIC · GOVERNED

Ground retail AI in metrics.

Not Visual Comfort production data. Not commissioned client work. Built so the team can see how dealer analytics and a trustworthy assistant should be wired.
